

**Title:** Integration Analyst  
**Reports To:** Director of Operations  
**Salary Range:** DOE  
**Tax Status:** Exempt

#### Summary

Direct, analyze and enable the successful integration of clinical data from hospitals, clinics, labs, payers, and other clinical organizations for purposes of health information exchange and quality/operations measurement. The successful candidate will coordinate efforts among stakeholder organizations, vendors, and co-workers, in a project-oriented approach, managing multiple integration projects while meeting quality, time and cost objectives.

#### Responsibilities & Requirements

- Establish and maintain positive working relationships with technical personnel.
- Develop, maintain and execute project plans on project management principles.
- Learn/understand HL7, CCD, and other industry standards for health information.
- Derive element-level quality guidelines and employ methods to evaluate, transform and/or drive source corrections using personal efforts and coordination with others.
- Document existing problems in need of correction, identifying dependencies for intended outcomes, with prioritization and severity based on impact to intended outcomes.
- Drive resolution on documented problems, with vendors, co-workers and staff.
- Summarize and report on work in progress, quickly escalating issues that are most critical to success.
- Perform and coordinate data mapping and other necessary transformations as appropriate to support successful health information exchange and health quality measurement objectives.
- Work as part of a team to help engage new stakeholders and maintain quality and relationships with existing stakeholders.

#### Education & Experience

Bachelors in Computer Information Systems, Medical Informatics, and/or comparable degrees and/or field experience. Healthcare background is a plus.

5 years professional experience, with demonstrated background in reasonably similar roles.
